IN

## INDIAN SCULPTURE

PART II

## TABLES

*An absolutely new approach to the study of sculpture. Different Schools have been studied in their minute details. An accurate objective basis for comparative study of the various Schools has been established.*

BY

**Raghu Vira,** M. A., Ph. D., D. Litt. et Phil.

AND

**Chikyo Yamamoto,** M. A.

*Japanese State Research Scholar at the International Academy of Indian Culture, Lahore*

# EYES

## Table XV

### Vertical Measurements

(*i*) A *is on the eyebrow. But when the eyebrow has width it is on the lower edge.*

B *is on the root of the upper lid. In the Mathura School, later period, and Mṛgadāva School, earlier period, there is a fold below the root of the lid. It is ignored. In Lahore No. 3*[x] *there is a fold too, just midway between* B *and* C *measuring, 0.4 cm. from each. In Lahore No. K*[x] A *and* B *cannot be properly marked. Hence the blanks.*

C *is on the outward edge of the upper lid.*

D *is on the inward edge of the upper lid.*

E *is on the inward edge of the lower lid.*

F *is on the outward edge of the lower lid.*

G *is on the root of the lower lid. In Mathura and Sarnath it is a chiselled line.*

(*ii*) *All points* A *to* G *lie on the vertical line passing through the centre of the right eyeball, except when marked "l".*

(*iii*) *Here and in the following table the fasting Śākyamuni, Lahore No. 2099, the execution of the eye is very peculiar. There are no eyebrows,* A *is on the bone ridge, and the eye is put deep in the socket.*

## Horizontal Measurements of the Eyes

(i) H *is the extreme end of the socket away from the nose, and* I *the extreme end near the nose.* J *is the outer corner of the eye away from the nose, and* K *the inner corner near the nose.*
(ii) *In the Gandhārodyāna School, general type,* H *to* I *are not always distinct. In the Mathura School, later period, and Mṛgadāva School, earlier period,* H *and* J *almost coincide.*
(iii) H' *and* I' *refer to the left eye, except when other measurements are on the left eye.*

## Table XVII

### Iris

(i) *The outline of the iris is only rarely chiselled.*

(ii) *Lahore No. 452 and Mathura No. 1390, Nalanda No. R[x] show two chiselled outlines. For the first two we have given both measurements.*

(iii) *The horizontal length is the diameter of the iris.*

(iv) *The vertical length is generally shorter than the diameter, because the upper part of the iris is covered by the lid. Only in a few cases is the entire orb of the iris visible. Here the vertical and horizontal lengths are identical.*

# NOSE

## Table XVIII

(*i*) *A is the upper point of the cibu-nas length.*
*B is the apex of the nose at the lower end.*
*C is the extreme point of the right eye.*
*D is on the summit of the ridge, CD crossing the central body line at right angles.*
*EF is the maximum width of the nose at the outer bases of the nostrils.*
*GH is the maximum width of the ridge, between the points where the nostrils begin to bulge out. These points are not always clearly defined.*

(*ii*) *In Lahore Nos. 969 and 574, CD column had to be left blank. During the course of rearrangement in the museum they have been removed from their previous positions and could not be traced.*

(*iii*) *The length of the nostril opening is rather crudely executed in sculpture. Being shallow there is no definite outline to allow precise measurement.*

(*iv*) *It will be noticed that the nose is the most vulnerable part of the face. It has suffered the most at the hands of the barbarous iconoclasts.*

## Table XIX

(*i*) *Mark that the mouth is always closed.*
(*ii*) A *is at the centre of the nose base.*
B *is at the centre of the upper edge of the upper lip.*
C *is at the centre of the meeting line of the two lips.*
D *is at the centre of the lower edge of the lower lip.*
E *is at the centre of the line where the lower lip meets the chin.*
FG *are the maximum width of depression between the upper lip and the nose.*
HI *are the corners of the mouth.*

# CHIN

## Table XX

A *is at the centre of the line between the lower lip and the chin.*
B *is at the centre of the apex of the chin.*
C *is at the centre of the line marking the lower limit of the chin.*
*When this line does not exist,* BC *and* CD *columns are left blank. In Mathura museum, however, it often exists, though a second journey could not be made in order to measure* BC, CD.
D *is at the centre of the line where the lower jaw meets the neck.*
*The statue, Lahore No. 969, having been removed from its original position became inaccessible for* BD.

# EARS

## Table XXI

*( i ) The ears are highly vulnerable parts of the body.*

*( ii ) When the right ear is damaged, the left has been measured instead. In all such cases "l" is appended to the measurements.*

*( iii ) The distance between the Karṇa-kūṭa base and the outer edge of the ear constitutes the width of the ear.*

*( iv ) The width of the lobe as well as of the lobe depression is taken at the middle.*

*( v ) In the case of Bodhisattvas, there is generally a pendant. Here it is not always possible to take either the length of the ear or the length and width of the lobe and the depression.*

*( vi ) Lahore No. 12 is a remarkable statue. There is no lobe depression on the right ear, while on the left there is only a line, which also appears in Lahore No. 552.*

*( vii ) The upper limit of the lobe depression remains undefined in many statues in Gandhārodyāna and Mathura School, earlier period.*

*( viii ) In Lahore No. 332 the depression is of an extraordinary form, narrow at the lower end, widening out to the upper end which remains undefined. Lahore Nos. 369, 2353 show a hole in the lobe.*
